WRIE · ONE-PAGE LEAVE-BEHIND

What we showed you, and what we did not claim

Trust is important. Authority makes trust institutional.

Your systems may all contain trusted data. WRIE addresses the harder question: which trusted definition governs this particular workforce decision, which source held authority for it, and who declared that — preserved with lineage, so the decision can be produced again months later exactly as it read then.

The worked example from the meeting

Two valid readings	Operational occupancy 91.7% · Revenue occupancy 89.9%. Both trusted. Both correct inside their own definition.
Decision	Capital planning.
Applicable definition	Revenue occupancy.
Applicable authority	Financial operating record.
Governed value	89.9% — with 91.7% preserved as an alternate valid value, not discarded.
Legitimate alternate use	Staffing may invoke the operational definition instead. Different decision, different governing definition, same lineage.

The next step we proposed

A back-test, not a pilot. Run WRIE against your own last twelve months of separations, schedules and coverage history. You keep the result, calculated from your records. No production connection, no protected health information, no commercial commitment.

What we did not claim

— No operator production deployment, and no connector running in an operator production environment.
— No protected health information in operator production.
— No named operator outcome, and no independent outcome validation.
— No savings figure and no payback period. Published industry ranges are modeling inputs, never results.
— No certification we do not hold. Commercial terms are discussed only under NDA.

Where to check us

WRIE Evidence Record	seniorcre.com/workforce-intelligence/evidence — one row per claim, the evidence state it sits at, and what remains unproven.
Methodology	seniorcre.com/workforce-intelligence/methodology — model inputs, prediction governance, review, measurement periods.
Owner worksheet	seniorcre.com/downloads/SeniorCRE-Owner-NOI-Worksheet.xlsx — price-free; your rent roll, your care records, your payroll.

Definition. Authority. Reconciliation. Lineage. The four that make data governable.

WRIE describes design intent and illustrative surfaces; synthetic examples do not demonstrate working governance or operator validation. No connector runs in an operator production environment, no protected health information is held in operator production, and no operator outcome has been measured or independently validated. Current status is published in the Trust Center. No pricing or commercial terms are published; commercial discussion occurs under NDA. SeniorCRE® is a registered trademark; Operator Authority Chain™ is a claimed trademark of SeniorCRE. As of September 14, 2026.
